Correction: Triglyceride-glucose index predicts postoperative delirium in elderly patients with type 2 diabetes mellitus: a retrospective cohort study

Miao Sun1,2†, Min Liu2,3†, Faqiang Zhang2,4†, Lijuan Sang1, Yuxiang Song1, Peng Li1, Siyuan Liu1, Huikai Yang1, Libin Ma1, Jiangbei Cao1, Weidong Mi1,2* and Yulong Ma1,2*

Following publication of the original article [1], the authors noticed that Figure 2 is incorrect. The correct figure 2 is shown below.

†Miao Sun, Min Liu and Faqiang Zhang contributed equally to this work.

**Fig. 2** ROC curve of TyG index for predicting POD in surgical elderly patients with T2DM. The optimal cut-off point was 8.678 with specificity and sensitivity of 44.6% and 65.7% (area under the curve 0.5637, 95% CI: 0.5199 to 0.6075). ROC, receiver operating characteristic; TyG: triglyceride-glucose; POD, postoperative delirium; T2DM, type 2 diabetes mellitus; CI, confidence interval.
